

# Assignment #10

## Lifelong Learning in Ethics

**Isaac Adebayo, Charnisha Azubuike,  
Broderick Bellard, Lisette Batiste**

Monday, April 20, 2026

# Course Topics We Have Learned In This Course

## **Ethics and Data Science**

- Responsible data collection, analysis, and decision- making

## **Cybersecurity Ethics**

- Protecting sensitive data and preventing breaches

## **Data Science Breach**

- Understanding causes, impacts, and prevention strategies

## **Ethical Framework**

- Applying structured approaches to guide ethical decisions

## **Useful AI Tools**

- Ensuring fairness, transparency, and accountability in AI systems

# The Future Of This Ethics Course

- An interesting topic that could be added is a project on NLP and the use of different video and audio transformers, in addition to text-based transformers.
- Another topic could be a coding assignment in which students review code to identify areas for improvement related to ethical concerns, particularly regarding security and how transactions are handled within the system.

# Staying Informed On Ethical Issues

**Isaac Adebayo** — I will stay informed regarding ethical issue by incorporating my skills to deter and alter ethical violation for those who are truly vulnerable, or who lack the knowledge/are refrained from attaining this knowledge.

**Charnisha Azubuike** — I will stay informed about ethical issues through ongoing professional development, including conferences, research, and updated guidelines in data science and public health.

**Lisette Batiste** — I planned to stay informed by monitoring the use of data in AI being used pediatric healthcare settings, by educating myself on the latest advancements and technologies.

**Broderick Bellard** — I will stay informed about ethical issues by continuing my education and research in AI, while acting as a practitioner-scholar so that everyday ethical concerns are recognized and addressed by the research community.

# Ethics in Future Careers

Isaac Adebayo — I plan to incorporate ethics by delving into mitigation strategy in my career to prevent exploitation of AI tools by malicious individuals.

Charnisha Azubuike — I plan to apply ethics by ensuring data accuracy, promoting equity, and using data and technology in ways that are responsible, transparent, and centered on community impact.

Lisette Batiste — In my career, I plan to incorporate ethics around how data is used carefully, while it's being obtained from disparate data systems. This will help move the needle in advancements, while being careful in how we own large amounts of data.

Broderick Bellard — I plan to apply ethics by developing and deploying frameworks that can be integrated into systems, so that ethical considerations are not an afterthought, but instead guide system design from the very beginning.
